30M Progress Meeting

Submitted by InfraRisk on Mon, 03/07/2016 - 14:58

The thirty month progress meeting took place over two days, on the 8th and 9th of March 2016. The meeting, hosted by SINTEF, took place in the Oslo, Norway. This was the last scheduled project team meeting before the final conference is due to take place in September 2016. The purpose of the meeting was to assess the project progress and discuss the various administrative and technical issues. The discussions were focused, in particular, around the Stress Testing Methodology, the IDST and the implementation of the case studies. Although not an official advisory board meeting, the chairman of the advisory board was in attendance to provide further guidance and recommendations.
